IMPORTANCE OF FIRE SAFETY

Fire Safety is an important issue for all of us. Most people will never face a major fire but don't think it will never happen to you. Fire is an unpredictable catastrophe which can occur any time. Hence one should make sure he is always prepared for such contingencies.

The primary goal of fire safety efforts is to protect building occupants from injury and to prevent loss of life and prevent property damage. According to Indian law, minimal fire safety equipment is mandatory for any developed property.

Today, most of builders and developers offer safety and security device as part of their project. But some builders opt for cheap equipment instead of purchasing high quality ones. In some cities or state, it is mandatory to install fire safety devices in shopping malls, schools and colleges, high-rise building or apartment.

Regular inspection as well as annual servicing is necessary to maintain the Fire Safety Equipment in good working condition. Fire Safety Installations for Buildings

Fire Safety arrangements have become the basic necessity for MNC (Multi National Companies), Offices, Schools, High Rise Buildings, Societies, Homes/Houses, Multi Storey Buildings/Houses, Shopping Complex.

Fire Safety device or Fire Detector Units come in a variety of models depending on the facility to be protected. As per the Fire Services Rules and National Building Code of India, the installation of the minimum fire safety equipment is mandatory in Schools, High Rise Buildings and Shopping Complex

Carbon Monoxide Detector, Smoke Alarms, Fire Extinguishers, Escape Ladders, Fire sprinkler systems, Fire doors & frames, Water storage etc are some of important Fire Safety equipment Installation of fire safety device is offered as a part of project by builders or developers. According to National Building Code, at least one stair case shall be provided as a fire staircase as defined in the National Building Code. The performance of a fire protection system depends not only on the quality of the product, but in the quality of its maintenance program..

SERVICES WE PROVIDE

Fire Safety is an important issue for all of us. Most people will never face a major fire but don't think it will never happen to you. Fire is an unpredictable catastrophe which can occur any time. Hence one should make sure he is always prepared for such contingencies.

Fire Shield facilitates the installation and maintenance of the following fire safety equipment too ensure a safe living and working environment

Hooter

Sounders are designed to simplify installations to provide primary and secondary for fire security applications. there are ideal when smaller notifications are desired

Manual Call point

Conventional call points to bypass gas released by pressing the front glass. Conventional call points to indicate alarm manually by pressing the front glass with break glass or resettable type options.

Smoke Detector

These detectors are low profile and have dual LEDs for 360 visual indication. the linking LEDs indicate normal operating conditions whereas the steady state indicate fire status.

Conventional Heat Detector

Conventional detectors are designed to work with all conventional panels. These detectors will raise an alarm when the detectors reaches 59c (Fixed)

Fire Sprinkler

Fire Sprinkler system that discharges water when the effects of a fire have been detected, such as when a predetermined temperature has been exceeded.

Fire Alarm Panel

Fire Alarm Panel is the controlling component of a fire alarm system. the Panel Receives information from devices designed to detect and report fires.

Fire Extinguisher

A fire extinguisher is an active fire protection device used to extinguish small fires, often in emergency situations. Fire extinguishers manufactured with non-cylindrical pressure vessels also exist but are less common.

Manual Call Point

Manual Call Point is a device for the manual initiation of an alarm. Manual fire alarm activation is typically achieved through the use of a pull station or call point. which then sounds the evacuation alarm for the relevant building or zone.

Fire Door

A fire door is a door with a fire-resistance rating (sometimes referred to as a fire protection rating for closures) used as part of a passive fire protection system to reduce the spread of fire and smoke between separate compartments of a structure and to enable safe egress from a building or structure.
